

HAND HYGIENE

A culture of clean hands is vital in the efforts to stem the transmission of bacteria, viruses and other potentially infectious organisms. This is particularly important in health care environments. The lack of hand hygiene contributes to the spread of multi-resistant organisms and is recognized as a significant contributor to outbreaks of infection. The World Health Organization recognizes that healthy hand hygiene practices “*can dramatically enhance patient safety, because there is much scientific evidence showing that microbes causing [health-care associated infections] are most frequently spread between patients on the hands of health-care workers.*” Hand hygiene is a responsibility shared among all health care providers.
